DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

I. Claims 1 drawn to a microbial process of making geranylgeraniol and/or farnesol, classified in Class 435, subclass 155, for example.

II. Claim 2 drawn to a microbial process of making nerolidol, classified in Class 435, subclass 157, for example.

Each of groups I and II is directed to separate and distinct inventions. The method of Group I is directed to a process of making geranylgeraniol and/or farnesol and group II is drawn to a microbial process of making nerolidol. These methods are distinct both physically and functionally, produce different products and require a different producer microorganism, as shown in that the bacteria and yeasts required for Group I are not co-extensive with the bacteria and yeasts required for Group II.

In addition, this application contains claims directed to the following patentably distinct species of the claimed invention: numerous bacteria and numerous yeasts recited in Group 1 and Group 2, respectively. Upon election of Group I or Group II, Applicant is required under 35 U.S.C. 121 to elect a single disclosed species of bacteria or yeasts of for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, claims 1 or 2 are generic to each of Group I and Group II, respectively.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Art Unit: 1651

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

The several inventions above are independent and distinct, each from the other. They have acquired a separate status in the art as a separate subject for inventive effect and require independent searches (as indicated by the different classification). The search for each of the above inventions is not co-extensive particularly with regard to the literature search. Further, a reference which would anticipate the invention of one group would not necessarily anticipate or make obvious the any of the other groups.

For these reasons restriction for examination purposes is proper.

Applicant is advised that the response to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed.

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 C.F.R. § 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a diligently-filed petition under 37 C.F.R. § 1.48(b) and by the fee required under 37 C.F.R. § 1.17(h).
